Literature Survey and Preparation of Experimental test bed
data collection & analysis
Field applications & testing
Paper Publication & Thesis Writing

Literature Survey (6 Months): This involves the study of various books and papers and their suitability for my research work .

Data collection and analysis (6 Months): This involves studying of the proposed site locations and analyzing the climatological data for that site.

Field Application and testing (11 Months): This involves practical application of research data at site and testing indoor comfort conditions.

Paper Publication and Thesis Writing (12 Months): As this is parallel activity with the third phase, we will publish our work in the peer reviewed journals. The thesis chapter scheme, can be sketched as the results will be in front of the researcher.
